

3 Signs You Need a New Rounding Solution

Rounding is critical to a successful healthcare organization. From patient satisfaction to life safety, rounds are an integral part of a hospital and yet, many organizations are not using a rounding solution or need to replace their existing solution.

No Closed Loop

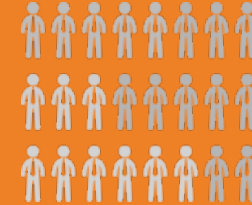

A Rounding Solution should allow for deficiencies to be identified, assigned, and tracked in real-time.

No Reporting

A Rounding Solution should capture data in a timely manner and allow for proper reporting to support regulatory readiness and patient satisfaction.

No Personalization

A Rounding Solution needs to be personalized to your organizations workflow and processes. Out-of-the-box solutions are insufficient.

Proven Rounding Results

12%
Increase in Patient
Satisfaction Scores

52%
Reduction in
Patient Falls

37%
Reduction in call
bells/lights

If your organization struggles with any of the above criteria, then it is time to implement or replace your rounding tool.
