

5 SD-WAN FEATURES

EVERY CLOUD USER SHOULD DEMAND TO ELIMINATE DOWNTIME

“ CONNECTIVITY IS PRODUCTIVITY ”

Iqbal Quadir

Fully Autonomous Protection

Time is money, you can't afford to having an outage extended by a slow manual response.

Get a "hands free" failover solution that automatically keeps you online before you even notice there was a link outage.

Business apps like Office365 & Salesforce are in public clouds, don't leave them vulnerable.

Demand a failover solution that protects it all.

Protect All Cloud Applications

Zero Disruptions of Live Sessions

Real-time apps such as live voice & video calls will fail when your session IP address changes.

For seamless, non-stop productivity, get a solution that preserves your IP address through link outages with no dropped calls on failover.

It all starts with staying connected to the cloud, but faster speeds will further boost productivity.

Don't settle for keeping your extra bandwidth in standby mode, choose a failover solution with full-time aggregation of all your links.

Use All Links as Active Connections

Minimize Bandwidth Consumption

Beware of packet duplication, it's only meant for protecting low-bandwidth applications and can slow down other apps during peak hours.

Your optimal cloud failover solution will protect all your applications while maximizing bandwidth utilization & cloud availability.

FAILOVER PROTECTION = SMART BUSINESS INVESTMENT

VINO SD-WAN solutions offer non-stop cloud connectivity while delivering maximum bandwidth utilization across all your applications.
